

# FOILING AND EMBOSSING ROTARY CYLINDERS

UVP PRODUCTS  
(PTY) LTD

# UVP PRODUCTS (PTY) LTD

## Rotary Embossing Tools

Rotary embossing tools are primarily used in the picture frame manufacturing industry. We export all over the world and do most of the local embossing wheels in South Africa. Our experience and quality product makes us a preferred supplier of rotary embossing tools.

All our rotary tools are CNC cut and engraved on quality materials such as brass, aluminum and steel giving us the flexibility to offer our clients materials best suited for the application. Our design department as well as the R&D facilities ensure that projects undertaken by our clients, end in success.

## Brass Cylinders

Our CNC equipment is fitted with a forth axis enabling us to engrave on cylinders or any rounded surface. This gives us great flexibility and opens many options for our clients. The engraved brass cylinder is primarily used in the narrow web printing industry for hot stamp foiling. Depending on our client's needs, the cylinders can be provided in various tooth sizes and web widths with the driving gear being supplied in either steel or brass.

## Features

- Unique multi-level embossing
- Precise hot stamp cylinders
- Rotary embossing kits, male and female rollers
- Sculptured 3D embossing cylinders
- All processes are done in house to ensure full quality control and timeous deliveries.
